SUMMARY

I am a final year student of software engineering. I have experience working with .NET and Java.

With my knowledge of design, I enjoy solving problems on the processing part of the system and making the system work more efficiently. I have a passion for technology. I often spend my time learning new technologies and trying to improve my skills.

TECHNICAL SKILLS

Programming Language: C#, Java, HTML, CSS, JAVASCRIPT.

Frameworks/Platforms:

- Winform, ASP.NET MVC, Entity Framework.
- A little about: Bootstrap, React.

Database Management Systems: MySQL, SQL Server, Oracle.

Others: Basic understanding of object-oriented programming. Have a good problem solving and analytical mindset.

EXPERIENCE (2021 - now)

Project: English center manager (1 member)

Description: a software to manage the list of students and staff in the English center, manage personal information of students and staff, report revenue and number of students each month.

Technologies: C#, Winform.

Responsibilities :

- Design user interface and function to respond to user requests.
- Design the data used for the system. Clear and detailed data design helps to increase the ability to manage information for both students, staff and important information of the English center.
- Programming functions and building interfaces based on previous designs.

Git: <https://github.com/lhanh21102000/C->

Project: cafe manager (2 members)

Description: Information management software for dishes, Status of tables, staff and revenue.

Technologies: C#, Winform.

Responsibilities :

- Design the interface of some management forms of the software to make the interface simple, easy for users to interact and use.
- Participate in software database design.

- Participate in the development of the software's search algorithm to help the software search for user-provided information quickly, efficiently and save time.
